Dataset Source & URL Reference Document

Course: ITAI 1371 – Machine Learning Midterm Project

Dataset Name: Vehicle Dataset from CarDekho (Car Details v3)

Kaggle Dataset URL:

https://www.kaggle.com/datasets/nehalbirla/vehicle-dataset-from-cardekho

Dataset Overview

The Vehicle Dataset from CarDekho contains 4,023 records and 13 attributes derived from the CarDekho automobile marketplace. It includes information about used vehicles, such as their names, manufacturing years, selling prices, kilometers driven, fuel types, seller types, transmission types, and ownership history. Additional attributes include mileage (km/l), engine capacity (CC), maximum power (bhp), and seating capacity.

This dataset provides information that can be used to explore the factors influencing used car prices and prepare data for machine learning applications, particularly regression models for price prediction.

Dataset Approval

The selected dataset is a curated subset containing 4,023 records, derived from the original PROJECTcardekho-1 source. According to the project information provided, this dataset was approved by the course instructor and meets the minimum requirement of 2,000 records for the midterm project.

Project Title:

Used Car Selling Price Prediction Using Machine Learning

Original Dataset: Vehicle Dataset – CarDekho

Source: Kaggle

Dataset URL:

Kaggle – Vehicle Dataset from CarDekho OR https://share.google/RU2RP6RdulojMxc8

Purpose of Dataset:

The dataset contains information about used vehicles, including vehicle type, make, year, selling price, kilometers driven, fuel type, seller type, transmission, ownership, mileage, engine, maximum power, and number of seats.

The initial dataset contained 8,125 rows; we selected around 4,022 rows by adding **vehicle type** as a manageable grouping variable. This helped us organize the data into more reasonable groups because the original dataset contained **over 165 different vehicle makers**, which would have resulted in too many categories to work with effectively.

The dataset is being used to explore factors associated with used-car selling prices and to prepare the data for machine-learning analysis.

Course: ITAI Machine Learning Mid-term Project

Dataset Name: Vehicle Dataset from CarDekho (Car Details v3)

Kaggle Dataset URL:
https://www.kaggle.com/datasets/nehalbirla/vehicle-dataset-from-cardekho

Dataset Overview:

The dataset incorporates 4,023 entries and 13 variables extracted from the CarDekho automobile marketplace

database. The key variables include vehicle name, manufacturing year, selling price, kilometers driven, fuel type,

seller type, transmission type, ownership classification, mileage (km/ltr), engine capacity (CC), maximum power

(bhp), and seating capacity.

Approval Metadata:

This curated 4,023-row subset was derived from the raw PROJECTcardekho-1 source and officially approved by

the course instructor, fully satisfying the 2,000+ row requirement.
